EDUCATION

Delft University of Technology

Delft, Netherlands

MSc. Marine Technology

Feb. 2024 – May. 2026

- **Coursework:** Marine Engineering, Ship Hydromechanics, Fluid Dynamics, Nuclear Reactor Physics
- **Thesis research:** Developed and applied an experimental setup and methodology for testing sails in wind tunnel inflow conditions representative of those encountered by wind assisted ships at sea
- Completed the program with an average grade of 8.2 with a 9.0 for the graduation thesis

Delft University of Technology

Delft, Netherlands

BSc. Aerospace Engineering

Sep. 2017 – Feb. 2024

- Completed the program with an average grade of 7.2
- Completed the **Minor Education** for which a physics teaching qualification (tweedegraadse lesbevoegdheid natuurkunde) was obtained
- Completed the **Minor Computer Science** with an average grade of 8.2

WORK EXPERIENCE

FlexDelft

Delft, Netherlands

Researcher

Jun. 2026 – Aug. 2026

- **Developing** and **testing** new systems in the wind tunnel lab
- Implementing the methodology developed during the graduation thesis

Vechtstede College

Weesp, Netherlands

Teaching assistant

Aug. 2020 – Jul. 2021; Sep. 2023 – Oct. 2023

Johan de Witt Scholengroep

The Hague, Netherlands

Physics teacher (internship)

Sep. 2022 – Feb. 2023

SKILLS

Programming : Python (NumPy, SciPy, Matplotlib, Pandas), Numerical modeling (Fluid dynamics, Rigid body dynamics, Monte-Carlo), Data processing and visualization

Engineering Design : Concept development, Design for manufacturing, CAD (Onshape, CATIA, CadQuery)

Hands-on : General tool usage, Workshop fabrication, Machining (Turning, Milling), Experimental fluid dynamics

Tools : MatLab, Simulink, PowerPoint, $\text{\LaTeX}$

VOLUNTEERING

Stichting Vakantiespelen Dijkgatsbos

Wieringerwerf, Netherlands

Summer camp counselor

Aug. 2023

Scouting Flevo Zee

Huizen, Netherlands

Scout leader

May. 2016 – Jul. 2023

HOBBIES

Programming, Sailing, Making stuff

PROJECTS

Experimental Wind Modeling

- Designed, built and tested a wind tunnel-setup to replicate apparent wind conditions of a wind-assisted ship
- Constrained the design to components producible with 3D-printing and laser cutting, enabling rapid prototyping and preventing manufacturing delays
- Graded with a 9.0 as part of the Marine Technology graduation thesis

Python-Based Navier-Stokes Solver

- Developed a direct Navier-Stokes solver in Python for the course Computational Fluid Dynamics for Engineers
- Graded with a 9.0

Design Synthesis Exercise (Aerospace Engineering graduation project)

- Tasked with designing a robotic spacecraft for orbital construction and servicing in a group of 10 students
- Led the project as chief engineer, conceptualized the design of an in-space refueling system and designed the attitude determination and control system
- Completed the exercise with a personal grade of 8.0

Gamified Diagnostic Assessment

- Developed a python-based gamification for diagnostic assessment of learning goals and applied it in the classroom
- Positively received by both teachers and students
